

HEDGE AND WINDBREAK TREES

JUNIPER, 'Eastern Red Cedar':

A 'tough as nails' plant for Kansas Landscapes. The native Eastern Red Cedar is the hardiest evergreen tree for the Kansas climate. Dark green foliage with blue berries, fast growth rate. Foliage turns russet-red during winter. Excellent choice for windbreaks, screening and conservation plantings. Tolerates poor soil, heat, drought and cold winter winds. Disease resistant.
AMH 35' AMS 25'

PRIVET, 'Lodense':

Low and dense is a very good description of this fine plant. Makes an excellent low, thick hedge that requires little care. Also can be sheared into globe shape. Good for planter boxes.
AMH 1-2" AMS 1-2"

POPLAR, 'Bolleana':

A variety of poplar that is long lived, growing to 40'. Smooth, gray-green bark, leaves green above, white underneath. Very narrow growth habit.
AMH-40' AMS-6'

POPLAR, 'Lombardy':

Tallest, fastest, cheapest screen available. Used as a divider between lots or on back property line. Normal life is 7-10 years. For permanent screen, we recommend longer-lived plants in front of the poplars. When poplars are gone, permanent plants have reached size for long-lasting screen. AMH-30' AMS-6'
